Subject: FW: Please extend the Lane Plating Site contamination measurements farther to the Southeast

Date: Thursday, November 15, 2018 7:14:34 AM

Hi there,

Please see the below that came in yesterday. Can one of you answer? I know we will sample this coming winter...

Thanks,

-Fd-

Hello,

I attended the Lane Plating Superfund site meeting last night. If I understand your soil contamination map correctly, the contamination level returns to baseline within a few hundred feet in all directions from the site except southeast. In that direction, you haven't taken data far enough away from the site to reach baseline level and therefore you do know how far the contamination extends.

I suggest that you immediately extend the range of measurements toward the southeast far enough to determine the extent of contamination. I hope that you can do that now without waiting to go through your official protocol. Unless you get this answer, I fear that you can't make a proper remediation plan.

What are your plans for extending the range of measurements?

Thank you,

Richard Guldi
